BASIC AUTOMATED BIRTH YEARBOOK

North Carolina Residents

1996

This report, referred to as ***The Baby Book,*** contains computer tables showing statewide counts and percentages for 1996 resident live births classified by select infant and maternal characteristics. This volume and corresponding county microfiche are prepared and distributed for the use of maternal and child health programs and other users of baseline birth data.

This year's cover features babies of proud parents who work for the State Center:

Top Center: Ayla Kala Gizlice born October 30, 1996. She is the daughter of Ziya Gizlice, Statistician II in the Statistical Services Section.

Bottom Left: Samuel Rand Rosefielde-Keller born February 25, 1996. He is the son of Kirk M. Rosefielde-Keller, Systems Integrator for the State Center.

Bottom Right: Mallory McKenzie Vann born March 26, 1996. She is the daughter of Dianne Vann, Grant Project Coordinator with the Central Cancer Registry/Lineberger Cancer Center, Chapel Hill.

(Photographs by Jim Page, Public Affairs, Department of Environment, Health, and Natural Resources.)

The pen and ink baby drawings on the divider pages were sketched by Gabrielle Principe, Statistical Educator with the Community Diagnosis Program at the State Center for Health Statistics.

DEFINITIONS

A ***'live birth'*** is the complete expulsion or extraction from its mother of a product of conception irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or any definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached (Definition adopted by the World Health Organization in 1950.).

A ***'not married'*** mother is one who has never been legally married or who has been widowed or legally divorced from her husband for more than 280 days.

'Birth order' is the sum of all previous deliveries (live births plus other reported terminations, i.e., spontaneous and induced at any time after conception) plus the present live birth.

'Birth weight' is expressed in grams. A low-weight birth is defined as a live born infant weighing less than 2500 grams (5 pounds, 8 ounces or less) at birth, regardless of the period of gestation (Birth Weight Index recommended by the expert group on prematurity of the World Health Organization, 1950.).

'Age of mother' is reported age in completed years at last birthday.

'Education of mother' is the number of years of schooling completed by the mother at time of the birth.

Beginning in 1990, the last seven tables of this report (Tables 16-22) provide new birth certificate items by birth weight by race. These pertain to medical history of the mother, maternal smoking and weight gain, obstetric procedures, events of labor and delivery, method of delivery, and conditions of the newborn. These items were added to the North Carolina birth certificate in 1988. In Tables 16 and 19-22, the row totals do not equal the total number of live births because some births involve multiple conditions.

RESIDENCE ALLOCATION

Births are assigned to the usual residence of the mother, regardless of the place of occurrence.

RACE ALLOCATION

Two broad categories, 'white' and 'minority,' are used. In cases of mixed parentage, the newborn is considered to be the race of the mother.

COMPLETENESS OF BIRTH REGISTRATION

Counts and percentages in this report are based on live births filed with the local registrar before April and processed in the state office prior to May of the year following the birth. The number filed subsequently is considered negligible for statistical purposes.

INSTRUCTIONS FOR READING THE TABLES

The page following the Table of Contents provides an example and instructions for reading the tables of this printout.

LISTING OF CROSS TABULATIONS OF RESIDENT LIVE BIRTHS

Instructions for Reading the Tables

Tables in this book produced by SAS System programming are of two basic types. Example 1 on this page is the first type. It is a tabulation of the resident births in North Carolina for selected criteria where each birth is counted only once in the table.

Section one of example 1 (above the dashed line) is the title and general description of the tables in a group. In example 1, we have resident births for the year 1996 with age of mother by birth weight in grams controlling for race.

Section two of example 1 (within the dashed line) is the specific variable that is controlled for the table. In example 1, the control variable is race equals minority.

Section three of example 1 (below the dashed line) is the table itself. At the top of this section is the name of the row variable and the name of the column variable. In example 1 the row variable is "Age" (age of mother) and the column variable is "Weight (Birth Weight)" (birth weight in grams).

The body of the table is divided into cells formed by dashed lines. Across the top are the values of the column variable (birth weight in grams). In example 1 these values are: Under 1500 grams, 1500-2499 grams, 2500 plus grams, unknown, and total. Down the left side are the values of the row variable (age of mother). In example 1 these values are: 21, 22, 23, 24, 25 thru 29, 30 thru 34, 35 thru 39, 40 thru 44, 45 or older, not stated, and total. Down the right side are the row totals. In example 1, row one, the total births to minority women 21 years old equals 2,080. Across the bottom are the column totals. In example 1, column one, the number of births to minority women where the birth weight is under 1500 grams equals 969. The column totals are printed at the bottom of each page even though the table may continue on more than one page. The remaining cells each contain three numbers. The first number is the frequency (i.e., the number of births for the specified age and birth weight). The second number is the row percent (i.e., the percent of the specified age group that were of a particular birth weight). The third number is the column percent (i.e., the percent of specified birth weight group that were born to women of a particular age). To illustrate, in the upper left cell of example 1 are the numbers 57, 2.74, and 5.88. This means that 57 babies with a birth weight less than 1500 grams were born to 21 year old minority women. It means that 2.74 percent or 57 of the 2,080 babies born to 21 year old minority women weighed less than 1500 grams. It also means that 5.88 percent or 57 of the 969 babies that weighed less than 1500 grams were born to 21 year old minority women.

Instructions for Reading the Tables

Tables in this book produced by SAS System programming are of two basic types. Example 2 on this page is the second type. It is a tabulation of the resident births in North Carolina for selected criteria where one birth may be counted more than once in the table.

Section one of example 2 is the title and general description of the tables in a group. In example 2, we have resident births for the year 1996 with conditions of the newborn by birth weight in grams controlling for race.

Section two of example 2 (the line just above the body of the table) is the specific variable that is controlled for in the table. In example 2, the control variable is race equals minority.

Section three of example 2 is the table itself. At the top of this section is the name of the row variable and the name of the column variable. In example 2 the row variable is "conditions of newborn" and the column variable is "birth weight in grams". Down the left side of the table (below row variable name) are the values of the row variable. In example 2 these values are: none, assisted ventilation, all others, one or more, unknown, and total. Across the top of the table (below column variable name) are the values of the column variable. In example 2 these values are: under 1500 grams, 1500-2499 grams, 2500 plus grams, unknown, and total

The body of the table is divided into cells formed by dashed lines. Each cell is divided into two rows by a dashed line. The first row (labeled "COUNT") is the number of births with a specific condition or conditions and birth weight in grams for minority women. In example 2 the number of births that had assisted ventilation and weighed less than 1500 grams was 385. The second row (labeled row percent) is the percent of births with the specific condition or conditions that were of a particular birth weight for minority women. In example 2 the percent of newborns that had assisted ventilation that weighed less than 1500 grams was 29.7 percent. In this example, if a birth had assisted ventilation and another condition of the newborn, then that birth would be counted three times in this table (under "assisted ventilation," "all others," and "one or more"). However, the birth is counted only once in the column total.

For another example, in Table 20, if a birth had several of the listed events of labor and/or delivery, it would be counted in each applicable row and under "one or more."
